Change User Password Dialog

It is a good policy to routinely change your password to protect data, even in what you may consider a 'safe' environment. In the workplace, failure to apply an appropriate password policy could leave you in breach of Data Protection laws.

Please consider the following guidelines when selecting a password:

- Ensure that your password is an adequate length; 6 characters should be the absolute minimum number of characters in the password.
- Ensure that your password is not open to dictionary attacks. Use a mixture of upper and lower case letters and numerics, and avoid words or names. Consider using the first letter from each word in a phrase that you will remember easily but is an unfamiliar acronym.
- Ensure that your password is changed regularly; at minimum, change it every ninety days.

The guidelines above should be considered a starting point: They are not a comprehensive list and they **will not guarantee security**.

The image shows a 'Change Password' dialog box from pgAdmin 4. The dialog has a title bar with the text 'Change Password' and a close button. The main content area has a light blue background and contains the pgAdmin 4 logo and the text 'pgAdmin 4' and 'Password Change'. Below this, there are three text input fields: 'Password', 'New Password', and 'Retype Password'. A blue button labeled 'Change Password' is positioned below the input fields. At the bottom of the dialog, there is a white bar containing a help icon (a question mark) on the left and a 'Close' button on the right.

Use the *Change Password* dialog to change your password:

- Enter your existing password in the *Current Password* field.
- Enter the desired password for in the *New Password* field.
- Re-enter the new password in the *Confirm Password* field.

Click the *Change Password* button to change your password; click *Close* to exit the dialog.
